Education

Hong Kong Metropolitan University | Bsc In Computer Science

Graduated: July 2026 | CGPA: 3.33/4.0

Relevant Courses: Software Engineering, Database Systems, Web Programming, Android App Development

Technical Skills

Programming Languages: JavaScript, HTML, CSS, React Native, Node.js

Frameworks/Platforms: Spring Boot, Expo, Apache Cordova, Node.js, JSP, H2 Database, MySQL

Tools: Git, Docker, IntelliJ IDEA, VS Code, Claude Code, Codex

Projects

LockMatch: Gamified MBTI Social Matching Platform (Final Year Project)

A gamified cross platform mobile social app built around MBTI-based matching to make meeting like-minded people more engaging through social discovery and playful interactions.

- **UI/UX Leadership:** Designed a Gen Z-focused interface, achieving an 82.4 SUS usability score.
- **LBS Proximity Matching:** Implemented Haversine-based location tracking for 1km real-time proximity matching.
- **Interactive Features:** Engineered responsive location updates and a 60-second instant chat invitation module to boost engagement.
- **Full-Stack Integration:** Connected AI matching and gamification features across React Native, Node.js, and MySQL.

HKETA – Hong Kong Transport ETA App (Group Project Lead)

A Mobile-friendly web app providing real-time transport information for KMB, Citybus, NLB, and MTR.

- Led the full-stack development and application architecture.
- Integrated government open APIs for real-time bus ETAs, route planning, and stop details.

Blood Pressure Tracker

A health tracking web platform featuring a multi-user portal, calendar history, trend charts, and color-coded classifications. Supports Excel export, PWA installation, and single-command Docker deployment.

- Built backend routes and MariaDB persistence using Node.js and Express.
- Designed a simple workflow focused on accessibility and ease of use.
